

Requirement Specification Document

Tourism and Travel Booking System

Week 1 – Requirement Analysis and Customer Database Module

Student Name	Ganesh S
Register Number	TU6253210211013
Project Title	Tourism and Travel Booking System
Week	Week 1

1. Introduction

The Tourism and Travel Booking System is a database-driven application designed to help customers search, book, and manage travel services such as tour packages, flights, hotels, and transportation. The system provides a centralized platform for customers, travel agencies, and administrators to efficiently manage bookings and customer information.

1.1 Purpose

The purpose of this document is to define the business, functional, and non-functional requirements for the Tourism and Travel Booking System. It also specifies the Customer Database Module, which stores and manages customer information required for booking and travel services.

1.2 Project Scope

The includes customer registration, tour package management, hotel and transportation booking, payment tracking, booking history, and customer profile management. The system aims to improve booking efficiency, reduce manual work, and provide a better travel experience.

1.3 Intended Users

- Customers – Search and book travel packages, hotels, and transportation.
- Administrators – Manage bookings, tour packages, and customer requests.
- Delivery Staff – Manage customer accounts, travel services, payments, and system reports.

2. Business Requirements

The system shall:

- Maintain customer information securely.
- Allow customers to browse and book travel packages.
- Manage hotel and transportation reservations.
- Record payment and booking details.
- Generate booking confirmations and travel reports.
- Improve customer service and operational efficiency.

3. Functional Requirements

Functional requirements describe what the system must do.

ID	Requirement Description
FR-1	The system shall allow customers to register and log in securely.
FR-2	The system shall allow customers to search for available tour packages.
FR-3	The system shall enable customers to book hotels, transportation, and travel packages.
FR-4	The system shall store customer booking and payment information.
FR-5	The system shall generate booking confirmations and invoices.
FR-6	The system shall allow customers to view or cancel bookings.
FR-7	The system shall enable administrators to manage travel packages and customer records.
FR-8	The system shall generate reports on bookings, payments, and customer activities.

4. Non-Functional Requirements

- **Performance:** The system should process booking requests within 3 seconds.
- **Security:** Customer and payment information must be securely stored and protected.
- **Reliability:** The system should provide accurate booking information with minimal downtime.
- **Usability:** The interface should be user-friendly and easy to navigate.
- **Scalability:** The system should support increasing numbers of customers, bookings, and travel packages.

5. Customer Database Module – Data Requirements

Since this week's focus includes the Customer Database Module, the following entity and attributes have been identified:

Attribute	Data Type	Description
customer_id	INT (Primary Key)	Unique customer identifier
full_name	VARCHAR(100)	Customer's full name
email	VARCHAR(100)	Customer's email address
phone_number	VARCHAR(15)	Customer contact number
address	VARCHAR(255)	Customer's residential address
registration_date	DATE	Date the customer account was created
passport_number	VARCHAR(20)	Passport number (for international travel)
booking_history	TEXT	Summary of previous bookings

6. Assumptions and Constraints

- The system uses a relational database such as MySQL or PostgreSQL.
- Customers must register before making bookings.
- Internet access is required for online booking and payment processing.
- Transactions are handled through an integrated payment gateway.
- This document covers **Week 1 – Requirement Analysis and Customer Database Module** only.

7. Conclusion

This **Tourism and Travel Booking System** provides a centralized solution for managing travel services and customer bookings. The Customer Database Module serves as the foundation for storing customer information securely and supporting future database design, including the ER diagram, relational schema, and implementation.
